Sebastian Vidrea

Senior iOS Developer · Kotlin Multiplatform (KMP) · Healthcare apps · Founder, The App Company

Brașov, Romania · on-site, hybrid, remote · vidreasebastian@gmail.com · linkedin.com/in/sebastian-vidrea · ssebi.github.io

PROFILE

Senior iOS and KMP developer with 10+ years of building apps from scratch and taking them to the App Store. At IBM I build the inner layer of the core library for Germany's national electronic patient record (ePA), bridging C++, Objective-C and Kotlin. I've been the sole developer on shipped products, led a mobile team, and since 2022 have run my own studio, The App Company. I build on fast, thorough test suites so releases stay safe: one app reached a 100% crash-free rate, and another climbed from 2 to 4.4 stars on the App Store within a few months.

CORE SKILLS

Languages	Swift, Objective-C, JavaScript, TypeScript
UI	UIKit, SwiftUI, React Native; design in Figma, Sketch, Adobe XD
Reactive	RxSwift, Combine, FRP (Functional Reactive Programming)
Architecture	MVVM (Model-View-ViewModel), MVP (Model-View-Presenter), MVC (Model-View-Controller), VIPER (View-Interactor-Presenter-Entity-Router), Clean Architecture, SOLID, modular design
Testing	XCTest: unit, integration, snapshot and UI tests; TDD (Test-Driven Development), BDD (Behavior-Driven Development)
Data & networking	Core Data, Realm, CouchDB, Firebase; REST (Representational State Transfer) APIs, URLSession, Alamofire, WebSockets
Devices & health	CoreBluetooth, FHIR (Fast Healthcare Interoperability Resources)
Delivery	Git, Fastlane, Bitrise, CI/CD (Continuous Integration / Continuous Delivery); Agile, Scrum, Kanban, Jira

EXPERIENCE

Software Developer (Contract) — IBM — Jul 2023 – present

- Working on the inner layer of the core library for Germany's ePA (elektronische Patientenakte, electronic patient record), developed to gematik's national specifications: wrap the C++ core in Objective-C and ship it as a framework that a white-label iOS app integrates.
- Expanded from Swift and Objective-C into Kotlin, integrating the framework into KMP (Kotlin Multiplatform) shared code used across iOS and Android.

Founder — The App Company, Brașov — May 2022 – present

Founded my own studio to deliver iOS and macOS apps for clients.

- **Mindless: Tasks & Bookmarks** (2022–2023) — iOS and macOS developer on a productivity app for the US company JoWoCo, LLC, shipped on iPhone, iPad and Mac. It merges notes, tasks, contacts and bookmarks into one tagged system, with link reminders that work as a snooze button for the web. Built in Swift and SwiftUI on a Realm database, following clean-code practices, with a CI/CD pipeline for releases. Built the contacts integration, letting users attach notes and reminders to people, and the link-saving and link-reminder features, and developed the Mac app.

Senior iOS Developer — Parhelion Software, Brașov — Feb 2019 – Jan 2022

- Rewrote apps from Objective-C to Swift, built new apps from scratch, and mentored junior developers.
- Improved CI/CD pipelines and automated testing, shortening the path from feature to release.
- **Heart for Health** — app for a Netherlands-based cardiology company that tracks blood pressure, heart rate and other readings from Bluetooth devices, using FHIR. Owned it from development to App Store distribution, with unit, integration and UI tests running on Bitrise. Automated screenshot evidence for the release smoke tests in a regulated healthcare setting, replacing a manual step on every release.
- **Texty** — sole iOS developer on an app that lets people text businesses that only take calls; built its custom modern design, then rewrote it in React Native when the client moved to cross-platform.
- **MasjidLink** — one of two developers on an app that connects users with their mosque's events, announcements and prayer-time changes. Set the architecture, added CI with Fastlane, then moved into a supervising role. Live on the App Store with daily users.

Lead Mobile Engineer — Navatec GmbH, Brașov — Jul 2017 – Feb 2019

- Led the mobile team for an online event-ticketing platform on iOS and Android, from wireframes and high-fidelity designs to technical requirements and release.
- **Keyvent** — sole developer from feature definition and design to release: event discovery, filtered search, ticket purchase and in-app QR (Quick Response) code tickets. Built a separate China target, replacing Stripe payments and Google and Facebook sign-in, which aren't available there.
- **Keyvent Manager** — ticket scanner for venue staff with a manual-entry fallback; stops the camera after inactivity to save battery, with Lottie animations for clear scan feedback. Live on the App Store.

Application Developer — IBM, Brașov — Nov 2015 – Jul 2017

- Joined as an intern; built features and fixed bugs in Swift and Objective-C apps for enterprise clients, working with senior developers and client stakeholders.

EDUCATION

- **Master's degree, Informatics** — Mobile Applications and Internet Technologies
  Transilvania University of Brașov · 2016–2018
- **Bachelor's degree, Informatics** — Applied Informatics in German
  Transilvania University of Brașov · 2013–2016
- **Study period, Medical Informatics**
  Hochschule Heilbronn, Germany · 2014–2015

CERTIFICATIONS

- iOS Lead Essentials — Essential Developer Academy, 2021
- 100 Days of SwiftUI — Hacking with Swift, 2020
- App Evolution with Swift — Code School
